

Site Plan and Sketch Design Fact Sheet

What is a site plan and sketch design?

Both the **site plan** and **sketch design** must be specific to the project and are mandatory requirements for the funding application.

A **site plan** shows the location or positioning of the new infrastructure relative to the site boundaries and potentially existing infrastructure at the site. For example, the site plan below. A Google Earth image may also be used, but will require additional information transposed to provide further detail.

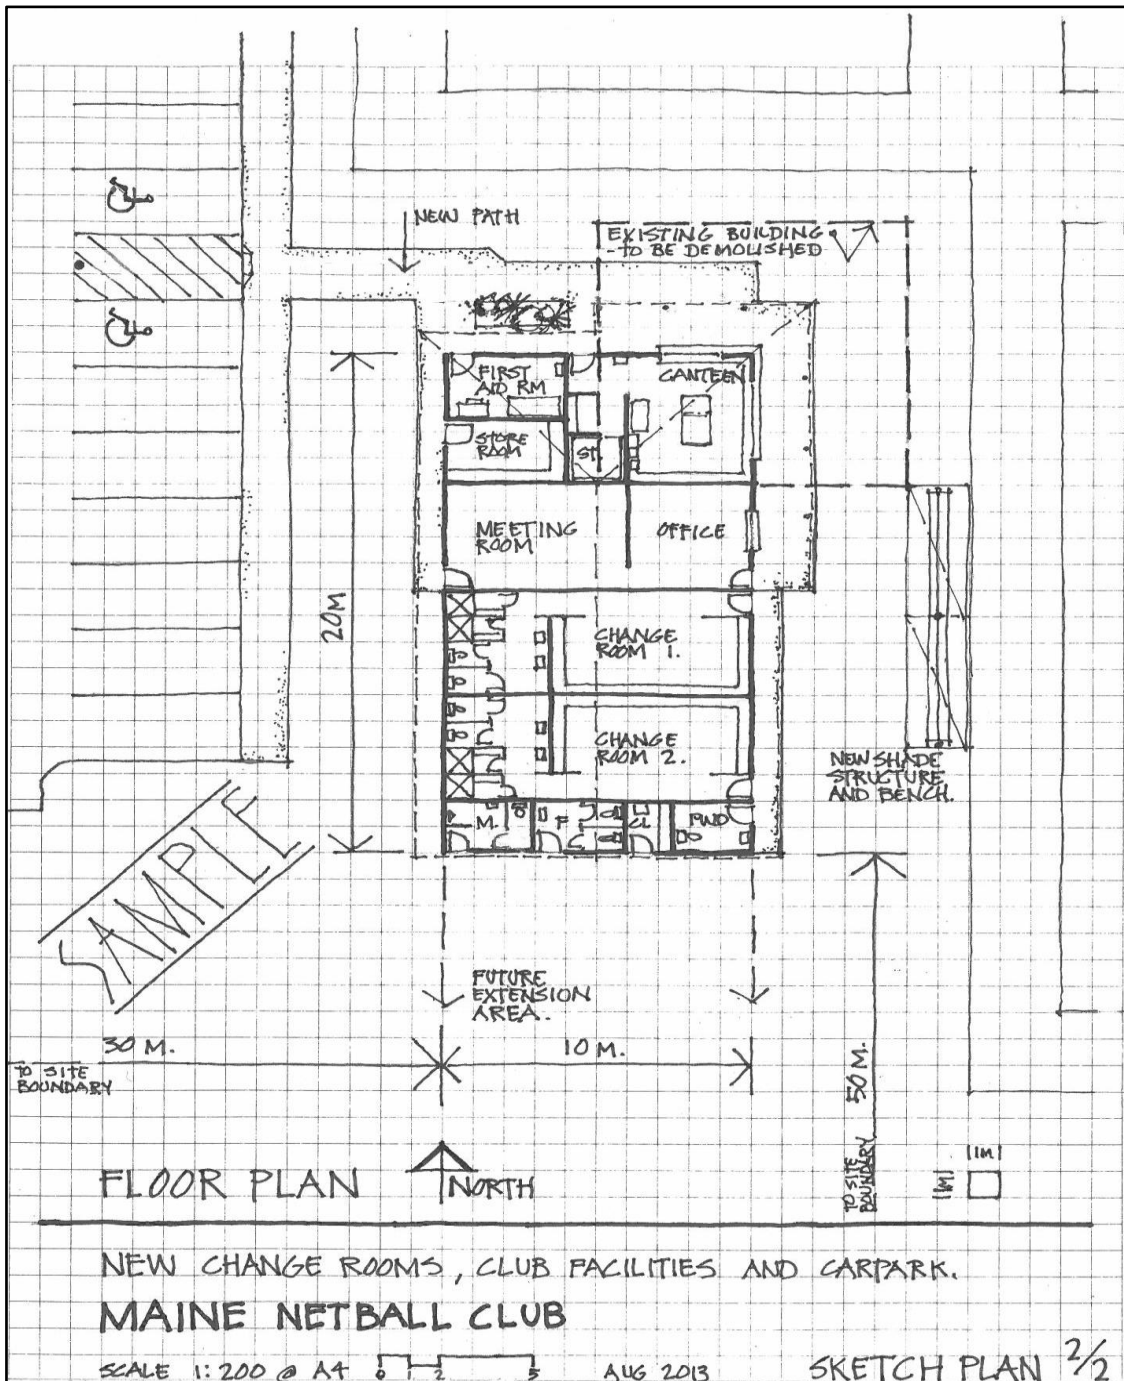

A **sketch design** should enable any reasonable person to clearly understand what the organisation plans to construct/develop and include the dimensions and main features of the project. A sketch design can also include elevations, sections, perspective (artist impression) to make a more complete sketch design.

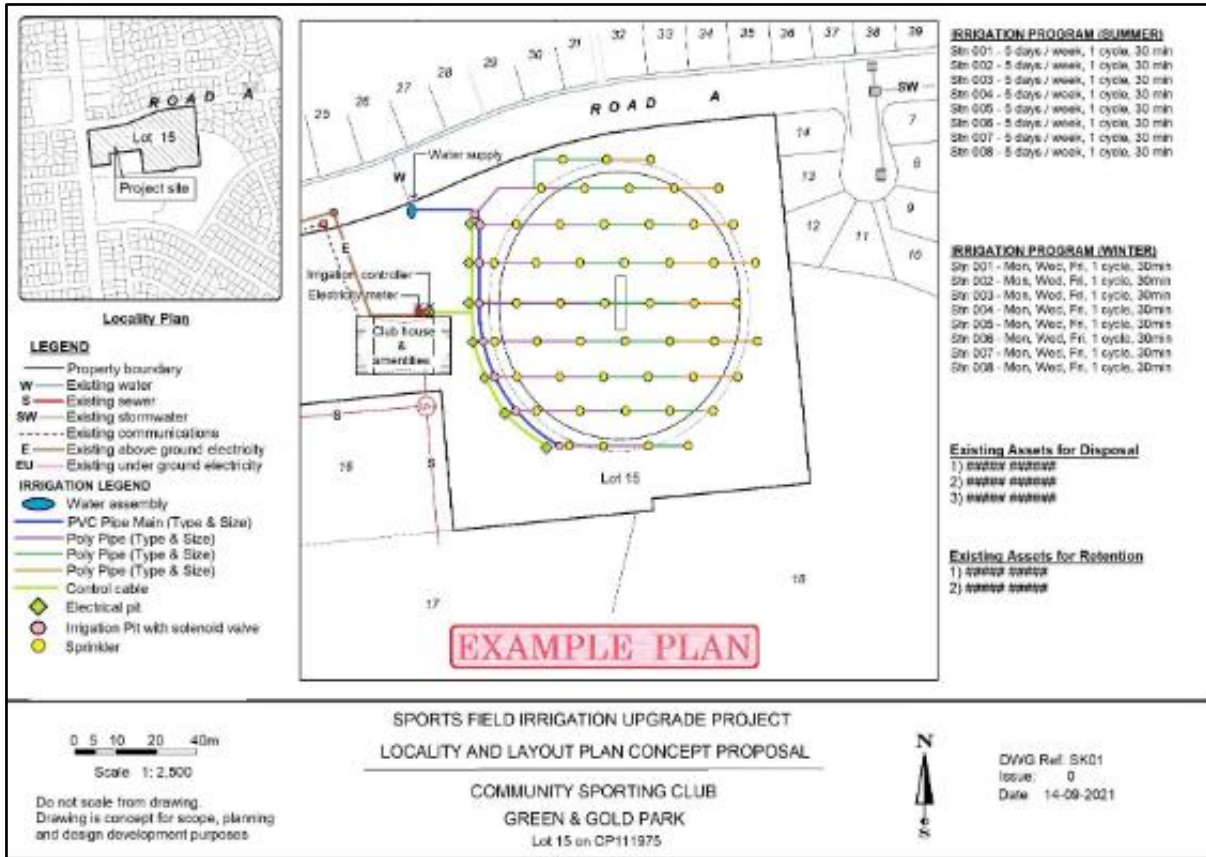

IMPORTANT

The sketch design needs to be developed by an appropriately qualified professional for the scope and scale of the project.

CLUB HOUSE EXTENSION

IRRIGATION UPGRADE PROJECT

SPORTS FIELD LIGHTING PROJECT
