

# The draft new Queensland Waste Strategy 2025–2030

## Community summary

Queensland is working towards becoming a zero-waste society where we reduce, reuse and recycle waste wherever possible.

Reducing the amount of waste we produce and reusing or recycling materials has many long-term benefits. By significantly cutting down on landfill we can protect Queensland's unique environment and support communities by reducing the cost of living.

It also supports local businesses, creates jobs, encourages innovation and industry development and helps drive waste reduction initiatives for a more sustainable future.

It will take the collective effort of government, industry, businesses and communities to transform the way we use and manage materials and achieve our vision for Queensland.

## The draft new Queensland Waste Strategy 2025–2030

The draft new Queensland Waste Strategy sets the foundation for how we plan to reduce waste and increase recycling to create economic opportunity.

We want to ensure we have the right plan in place to boost Queensland's resource recovery rates and stimulate economic growth.

The draft new Queensland Waste Strategy outlines the direction and action needed to avoid generating waste in the first place and manage materials as valuable resources.

## We want to hear from you

We are seeking your input on:

- whether the draft new Queensland Waste Strategy can deliver environmental and economic benefits for Queensland
- the actions and initiatives that will be most effective to achieve our vision
- the materials that are the highest priority to reduce, reuse and recycle
- which strategic focus areas in the draft new Queensland Waste Strategy are the most important.

By participating in the consultation, you can shape how we collaborate, invest and drive innovation to produce environmental and economic benefits for Queensland.

## How to get involved

To have your say visit the [draft new Queensland Waste Strategy](#).

The consultation closes 5pm Friday 26 June 2025.
